

Sketch of the main menu of the iPad app is shown above. This app will **sync data** when there is an internet connection, but it should be able to fully work in **offline mode**.

The app will be used by **Sales Agents / Admin** and will obtain data using web services (REST). Only data which has changed since the last sync will be updated.

The Sales Agent will have his own Access Login credentials and will be able to manage his set of customers, as well as be able to place orders for them.

“**Quick order**” feature will be used for quickly entering orders (search by product code, SKU or name). We will display the search result(s) and be able to enter the quantities in a quick way. Details of the cart (order) should also be shown on the same page.

“**Tasks**” will be a local feature and tasks data will not be obtained from web services.

“**Settings**” will allow user to select whether he will do syncing on WIFI only, or also on 3G/4G network. Language selection will also be selected here.

“**Contact us**” will be a simple form where user will be able to send an email to the Company. It’s not meant to replace a mail client.

Would like to discard “Media”, and instead use “**Map**” instead, where the customer locations will be shown.

This is the concept behind the “**Catalog**” feature.

The Sales Agent will be able to browse through the products, and filter by category, brand, season, collection, etc.

A summary of the “Order (cart)” contents will be shown below (e.g. total quantity and amount), as well as Navigation links to the “**Cart**”, to the “**Main menu**”, etc.

The Sales Agent will be able to enter the quantities ordered by the customer on the product page. If the product has attributes (e.g. color / size), then we could display a matrix (see concept below). The sales agent will also be able to save orders and be able to work on them later. Only confirmed orders will be sent to the server.

The Sales Agent will be able to manage his customers (edit customer details), place orders for customers, view the order history of a particular customer.

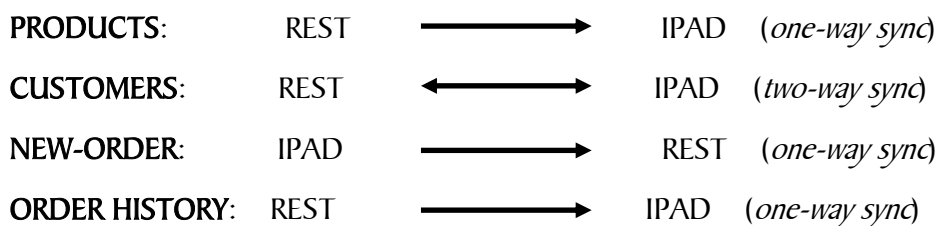

All activities on the app will be logged (e.g. modified records, synced data, order submissions). “**Activity Log**” will be available from the main menu.

On the product-view page, all product options will be shown (either as a matrix, or a list, depending on the number of attribute options).

Color	Quantity

Blue	Male	M	5
Yello	Male	S	2

Special attention to the following functionality....

## QUICK ORDER ENTRY

### BARCODE & QR CODE

Enter item codes (e.g. using Barcode or QR code scanner), and quantities in no time: Quick order form

## CATALOG BROWSING

### ATTRACTIVE INTERFACE

Browse through the product catalogue and be able to enter the quantities for each attribute. Be able to filter products by the attributes (e.g. Filter by Brand, Season, Collection, etc). A signature page can be optional.
